

Big Mouth® Plugs

Big Mouth® plugs serve multiple applications from by-passing flow to sewer air testing. They come equipped with a removable 3/8" eyebolt for lifting and lowering while being used in conjunction with a poly-lift line. They also feature a single removable tire valve allowing for easy repair or replacement with quick disconnect fittings. The Big Mouth has a large male NPT threaded by-pass that is fitted with a removable plastic cap. The threaded by-pass is easily adapted for use with standard sewer hose with quick disconnect fittings. Great plug for gravity by-passing or by-pass pumping.

The Big Mouth also has an optional cap-style conversion kit that can be used for sewer air testing and allows for quick inflate/deflate during tests.
