## POLYMER DISPERSANT

**Opti-Pro's** Polymer Dispersant is a highly effective polymer-dispersing agent that virtually eliminates polymer build-up and blinding problems. **Opti-Pro's** Polymer Dispersant is often used to solve filter-blinding problems associated with processing biosolids. However, it is also highly effective in areas where polymer build-up or spillage could cause safety problems. Plus, it's used by many industry professionals as a maintenance tool to remove polymer from tanks, make up systems, and lines.

**Opti-Pro's** Polymer Dispersant contains no caustics, ammonias, solvents, or acids, while maintaining a neutral pH. **Opti-Pro's** Polymer Dispersant passes Priority Pollutant Scans, Acute Toxicity Analysis, Corrosion Tests, and Fabric Lab Tests—making it one of the safest polymer dispersants available to the industry.

This unique liquid—employed in a dilution ratio of ten-to-one—is inexpensive, simple to use, safe, and highly effective. **Opti-Pro's** Polymer Dispersant is available in both five-gallon pails and 55-gallon drums.
