

Saws, Pruners & Loppers

Tri-Cut Pole Saw

Heavy-Duty Pruner

Jameson Pole Saws and Pruners

- Pole saw kits feature Barracuda™ tri-cut saw blades
- Heavy-duty pruners cut limbs up to 1 1/4" in diameter
- Durable, lightweight fiberglass poles won't crimp under stress like aluminum poles

Jameson pole saws and pruners are built to handle tough professional jobs. Customize your system by choosing a pole saw kit or pruner best for your application, and then order a fiberglass pole to go with it. A pole saw/pruner package (stock # 23267) is available as a complete kit; it includes a pole saw, pruner and telescoping pole.

Pole saws are equipped with Barracuda tri-cut saw blades for clean cutting and optimum wear resistance. Saw heads feature lightweight aluminum construction and a low profile for easy maneuverability in dense foliage. The blades' hook design helps to clear loose limbs and branches.

Includes: pole saw head, saw blade and pole adapter. Poles sold separately. Replacement blades and an adjustable leather storage scabbard are also available.

Pruner features a beveled hook for dual-cutting action and a 20' rope attached via a fixed pulley. This heavy-duty cutter is made from forged steel components and has an ultra-stiff spring for smooth cutting action.

Includes: pole adapter. Pole sold separately.

Telescoping poles are sold separately. These 1 1/4" Dia hollow-core fiberglass poles feature a double lock system that prevents slippage. Simply extend the pole sections to the desired length, twist the top pole to engage the internal lock, and tighten the outer cap to lock it secure. If you need to reach even further, an optional 6-ft extension pole (stock # 23287) is available.

Includes: female ferrule.

Optional storage scabbard

Telescoping poles rotate for easy use

Pruners and Loppers

- Lightweight, ergonomic construction
- Choose from anvil and bypass styles

A pair of hand pruners or loppers is a must for hacking hard, woody stems. Choose from anvil and bypass styles. Anvil styles feature a single straight cutting blade that closes down on a flat edge or anvil, and are ideal for cutting dead or dry growth. Bypass styles use two curved blades that work like a scissors. This style is the most popular and is recommended for green or wet growth.

Choose pruners for trimming stems and small branches. Their serrated blades grip branches for a controlled cut. Loppers feature long handles that give you leverage to cut bigger stems. Oval-shaped handles and cushioned grips minimize user fatigue. Their hardened and coated non-gumming blades produce a clean cut with minimal force.

DESCRIPTION	CAPACITY	LENGTH	WT (LBS)	STOCK #	EACH
