

Chemical Feed Tubing

- High working pressures
- Choose from PVC, polyethylene and high-density polyethylene
- Meets FDA standards

EXPANDED selection!

Tubing sizes, whether plastic, copper or steel, are measured OD. Therefore, the ID can vary depending on wall thickness.

operator notes

For chemical feed applications where chlorine is used extensively, we stock only the very best brands and grades available. In unmanned facilities, you need tubing you can trust. Our premium industrial-strength tubing is extruded from high-quality resin for long-term strength and durability. Its resistance to stress cracking greatly exceeds that of ordinary tubing found at local hardware stores. With this high-quality tubing, you'll see longer life, less maintenance and less downtime.

Choose the best tubing for your application

PVC suction and polyethylene discharge tubing are suitable for general chemical feed applications. LLDPE (linear low density polyethylene) tubing meets NSF 61 standards for potable water treatment. Translucent high-density polyethylene discharge tubing is ideal for use with aggressive chemicals like sodium hypochlorite. Black high-density polyethylene discharge tubing is the best choice for applications involving gas chlorinators. Clear braided PVC hose works great in chemical transfer applications.

When determining size, remember that tubing is measured using OD (outside diameter), vs. pipe and hose which are measured using ID (inside diameter).

Note: Tubing is sold only in the prepackaged lengths shown.

PVC Suction Tubing
