USABlueBook Single-Bag & Multi-Bag Filter Housings

- Convenient swing bolt (eye bolt) closure system
- V-ring design with snap-fit closure prevents bypass
- 304 stainless steel construction resists corrosion

USABlueBook bag filter housings help improve your overall filtration process. Use them in applications rated up to 150 psi. Their V-ring design features a positive snap closure that prevents bypass and ensures the delivery of clean effluent. All units feature a single O-ring seal, an easy-to-access swing bolt (eye bolt) lid closure system, and an NPT port that allows draining before service. Choose from single-bag or double-bag housings.

Single-bag housings feature a uni-style side or bottom outlet port for flexibility in piping configurations, and two gauge ports. Adjustable tripod leg assembly provides the stability needed for in-line setups.

Multi-bag housings feature flanged inlet/outlet connections, and a bearing-assisted handwheel closure davit system that enables you to swing the heavy lid out of the way to access filter bags. Heavy-duty support legs are welded on for maximum support. Multi-bag housings are ASME-rated (code U-stamp).

Note: Filter bags are not included; order on page 383-384.

Shipping: Select models may ship motor freight. Contact USABlueBook for more information.

Hayward® Simplex & Duplex Bag Filter Housings

- Non-corrosive all-plastic construction
- Easy bag changeout—no tools required

Hayward bag filter housings stand up to the most demanding industrial and commercial applications. These all-plastic units feature rugged thick-wall construction rated to 150 psi for years of trouble-free service.

Choose from simplex or duplex housings. Duplex housings let you change out filter bags without taking the unit off line. Just turn the diversion lever from one filter housing to the next. Both styles feature hand-removable housing covers for easy bag changeout. See page 383-384 for filter bags.

Note: Drain valve not included; sold separately (stock # 54781).

Shipping: Select models may ship motor freight. Contact USABlueBook for more information.

Pressure rating:	150 psi
Seals:	Viton®
Connections	
Simplex:	2" true union inlet/outlet, 2" NPT drain
Duplex:	2" 150# class flanges for inlet/outlet, 2" NPT drain
