## Filter Bags

- Fit any industry-standard bag filter housing
- 150 and 200 micron filters are great prefilters before sand filters or cartridge-style filters

Filter bags offer easy cleaning and change-out. Dirt collects on the inside of the filter bag and is disposed of by removing them, using the handle on the filter. Each bag is constructed from 100% polypropylene CFR-approved material. Single glaze reduces fiber shedding. Filter bags are available for removal of 1, 5, 10, 25, 50, 100, 150 or 200 micron size particles. Bags last 3 to 4 weeks, depending on amount of solids in your system.

**Note:** Under high solids, bags may last only a few hours before needing replacement. Housing sold separately.

HOUSING SIZE	DIMENSIONS (DIA x L)	MICRON SIZE REMOVED								CASE OF 25 \$
