

Toss and Go Packets

Liquid Dye

Tropical Shade® Lake and Pond Dyes

- Create a long-lasting natural color in your lake or pond
- Reduce sunlight penetration and hide submerged weeds
- Environmentally safe

Reduce sunlight penetration while hiding submerged weeds and algae. Dye creates a long lasting, natural look in your lake or pond without harming or discoloring fish, turf, birds and other wildlife. Choose from powder or liquid.

Toss and Go™ packets are pre-measured water-soluble packets containing Sunblocker powder. Toss in your pond and let it disperse; each packet colors approximately one acre-foot (325,000 gallons).

Liquid dye is concentrated and long lasting. Apply directly to the water body—wind and water currents will mix the dye. Use one gallon per four acre-feet (1,300,000 gallons).

Note: Actual coverage may vary based on water quality.

Shipping: Quantities of 7+ of the 5-gallon pails ship motor freight.

Aquashade® Growth-Control Pond Dye

- Controls unsightly pond aquatic plant growth
- Non-toxic, natural
- EPA Registration #33068-1

Unsightly pond weeds a problem? This EPA-registered concentrate blocks out specific light rays critical to photosynthesis. Leaves water a natural teal blue. One gallon covers one acre with a four-foot average depth. Follow labeled instructions.

Kasco® Macro-Zyme™ Pond Bacteria

- 100% safe for wildlife and humans
- Removes pond scum and odors
- Safe and non-toxic—no permit required

This unique blend of naturally occurring bacteria and enzymes is amazingly easy to use—just apply to your pond, and you're on your way to healthier water. It rapidly biodegrades top and bottom sludge while reducing components that contribute to sludge build-up. Use to eliminate fish waste and ammonia, and rapidly remove dead grass, leaves and paper.

Choose from three forms of Macro-Zyme. **Water-soluble bags** make application easy. Simply toss one of these bags into your pond to start treating your water. **Muck Pucks and Muck Blocks** slowly release bacteria into your pond. They're great for targeting specific areas. **Bulk formula** is perfect for large areas. Apply it where you need it, at the exact dosage required. One pond treats 1 acre-foot.

Note: In temperatures of 55°F and warmer, water-soluble bags, Muck Pucks and bulk formula should be reapplied every 2 to 3 weeks. Muck Blocks work on a 30-day time-release cycle.

Cutrine® Plus Algaecide/Herbicide

- Effective against a wide variety of algae
- Contains chelated copper—stays in solution for continued control
- EPA Registration #8959-10

A patented, concentrated liquid. No water use restrictions following treatment. As with any chemical, always read precaution statements prior to application. Apply at 0.6 to 1.2 gallons per acre foot of water treated. To ensure satisfactory results, correct identification of the weeds to be treated is important.
