

Toss and Go Packets

Liquid Dye

Tropical Shade® Lake and Pond Dyes

- Create a long-lasting natural color in your lake or pond
- Reduce sunlight penetration and hide submerged weeds
- Environmentally safe

Reduce sunlight penetration while hiding submerged weeds and algae. Dye creates a long lasting, natural look in your lake or pond without harming or discoloring fish, turf, birds and other wildlife. Choose from powder or liquid.

Toss and Go™ packets are pre-measured water-soluble packets containing Sunblocker powder. Toss in your pond and let it disperse; each packet colors approximately one acre-foot (325,000 gallons).

Liquid dye is concentrated and long lasting. Apply directly to the water body—wind and water currents will mix the dye. Use one gallon per four acre-feet (1,300,000 gallons).

Note: Actual coverage may vary based on water quality.

Shipping: Quantities of 7+ of the 5-gallon pails ship motor freight.

AquaPRO® Herbicide

- Systemic herbicide
- Handles broadleaf weeds and cattails around aquatic sites

This concentrated formula is effective against a variety of emergent aquatic and terrestrial grasses, broadleaf weeds, brush, and cattails in and around aquatic sites. There is no restriction on the use for irrigation, recreation or domestic purposes.

AquaPRO must be used with a non-ionic surfactant approved for the application site. We offer Cide-Kick II®, which breaks down the waxy leaf cuticle for more effective herbicide uptake. Suggested mixture and dilution rates for your particular weed(s) are covered in the manual.

Aquashade® Growth-Control Pond Dye

- Controls unsightly pond aquatic plant growth
- Non-toxic, natural
- EPA Registration #33068-1

Unsightly pond weeds a problem? This EPA-registered concentrate blocks out specific light rays critical to photosynthesis. Leaves water a natural teal blue. One gallon covers one acre with a four-foot average depth. Follow labeled instructions.

Sonar™ RTU Aquatic Weed Herbicide

- Ready to use—apply directly to your pond
- Controls duckweed and other nuisance aquatic weeds
- Effective against the entire weed—roots and all

Control aquatic weeds including duckweed, milfoil and hydrilla safely and easily with Sonar RTU herbicide. Apply this ready-to-use formula directly to your pond. It's absorbed by aquatic plants, with any remaining chemical being broken down by sunlight. Results are noticeable in 3 to 6 weeks. For best results, apply Sonar RTU from February to June.

Note: Consult with appropriate state or local water authorities before applying this product.

Dosage Schedule

Suggested dosage is based on water volume. The following schedule is for a 1/2-acre pond with an average depth of 4 feet:

Initial application: 2 quarts

Additional application: 1 quart each on days 21 and 42

Do not apply more than 3 quarts per acre-foot in a single season.

Stay safe near ponds and lagoons. See page 1545 for **Life Rings & Vests.**
