

## Hach Alkalinity Test Kits

- Simple drop count method

Hach's alkalinity test kit uses drop count titration and powder pillow chemistries to easily check for alkalinity. Provides results in phenolphthalein and methyl orange alkalinities with results expressed as CaCO<sub>3</sub>.

**Includes:** Glass sample bottle, measuring tube, reagents for approximately 100 tests, instruction card and carrying case.

**Range:** 5 to 100, 20 to 400 mg/L  
**Resolution:** 5, 20 mg/L

## LaMotte Total Alkalinity Test Kits

- Economical alternative for basic test method
- Great for field testing

This test kit offers a basic test method that will give you simple, easy-to-read results without spending large amounts of money on laboratory equipment. This method is not as accurate as the normal analytical test method. However, it is not as difficult for operators to learn and it meets the basic requirements of *Standard Methods*.

This test is extremely important in lead/copper rule corrosion testing. Results are read via micro buret and are expressed as CaCO<sub>3</sub>.

The replacement reagent refill kit contains LaMotte's Alkalinity Indicator #1 (3870-E, 15-mL), Alkalinity Indicator #2 (3869-E, 15-mL) and Alkalinity Titration Reagent B (4493DR-H, 60-mL).

**Range:** 0 to 200 mg/L  
**Resolution:** 4 mg/L

## Ammonia Test Strips

**NEW!**

- Economical and reliable
- Reduces interference from Cr, Fe, Mn and Ca

These easy-to-use ammonia test strips get accurate test results fast. Simply dip in water for five seconds, and in one minute your results are available. Each strip is composed of two filter pads to reduce potential interferences. Each bottle includes 25 strips.

**Range:** 0 to 6.0 mg/L  
**Increments:** 0, 0.5, 1.0, 3.0, 6.0
