

Hach sensION+ pH and ORP Electrodes

- Wide variety of electrolyte and junction combinations for every situation
- Choose contATC automatic temperature compensation for exceptionally accurate temperature measurement

Rugged SensION+ electrodes offer different electrolyte and junction types for the most flexibility possible. Electrodes with the patented contATC automatic temperature compensation system use a silicone thermal conductor embedded in the glass bulb of the electrode for more precise temperature readings.

Choose from four electrode types. **Gel-filled electrodes** require little maintenance. **Solid electrolyte electrodes** have an open junction. They also require little maintenance and are ideal for wastewater, dirty or viscous samples. **Refillable electrodes** feature a sleeved reference and silver ion barrier that prevents clogging due to Ag+ precipitation. **Multi-function electrodes** let you measure multiple parameters with just one electrode.

We also RECOMMEND...

Electrode Storage Bottles & Solution

Bottle protects standard 12-mm diameter electrodes against bumps and keeps them from drying out between uses. Fill bottle with 50 mL of electrode storage solution.

Storage Solution, 500 mL	30467		—

Electrode Arms

Just a touch of a finger lets you position all standard or combination electrodes. Move from one sample to the next quickly. Electrode always remains vertical if desired due to arm articulation. Weighted base. Very stable. Pivots 360°.
