

## Multiquip® Compaction Equipment

- Eliminate future foundation problems to ensure longer structural life
- Feature reliable Honda engines

Innovative Mutiquip compaction equipment lets you compact foundations to increase load-bearing capacity, reduce settling and shrinkage of soil, and provide better stability. All models feature heavy-duty Honda engines, and an hour meter and tachometer to track run times and engine RPM.

Shipping: Ships motor freight.

*Low maintenance;  
easy handling*

**NEW!**

### Rammers

- Use for cohesive soil types, like clay and silt

Multiquip's Mikasa lightweight rammers are a great option for trenches and tight spaces. These 4-cycle rammers feature a Honda GX100 engine with lower noise levels, reduced emissions and lower fuel requirements.

The antivibration handle reduces operator fatigue, and rollers offer increased portability. The cyclonic air filtration system captures 98% of environmental particles.

### Ride-On Rollers

- Use for granular soils like gravel, sand and asphalt

Tandem drum ride-on rollers provide easy maneuverability and a clear line of sight. Rollers are engineered for heavy-duty work with a hydraulic drive, articulated steering and tight clearance ability (19" high curb clearance and 1/4" near walls and structures).

Roller features a reliable Honda engine with easy starting and quiet operation. The maintenance-free articulation joint and vibratory assembly greatly reduces service time. The 35-gallon water tank with tethered cap provides extended run time on asphalt applications.

### Plate Compactors

- Use for granular soils like gravel, sand and asphalt

Multiquip's Mikasa brand plate compactors are recognized as the industry standard for compacting granular soil and asphalt. Each features a cyclonic pre-cleaner, sealed belt covers and cog-tooth belt drives to extend the life of the engine and belts. The single-cast baseplate and eccentric housing lower the center of gravity and increase travel speed.
